Abstract

Purpose

The impact of financial reforms and financial development on an economy has received considerable attention over the recent past. This paper aims to investigate whether financial liberalisation and financial development increase the likelihood financial crises in Southern African development community (SADC) countries.

Design/methodology/approach

Due to the binary nature of the dependent variable, the logit model is used for the analysis using data for the period 1990 to 2015.

Findings

The results showed that financial liberalisation captured by real interest rates reduces the
